Project Url-2 : _____
Video Demo URL. : https://www.youtube.com/watch?v=uC0OUFwUUN4&ab_channel=kamilszlufik_____

	Social 1 or Analytics	Social 2 or Maps	TDD or Images	Auth	Devops Or Architecture
Baseline			I would have top say unit testing is baseline as its incomplete and not eveything is tested coverage reports is ran as well but encountering some problems hence not above baseline		Bassline as attempting to render it in aws has not worked and i have not committed anythign to github systematically but in one go at the end.
Good				I would put this project here as we successfully hash and salt passwords. The hash are compared through JWT strategy and users are logged in successfully.	
Excellent		I would put social 2 at excellent as we can add reviews and rating we can also have a functioning discussions forum where users can create comments and recursively reply to each other.			
Outstanding	<i>Judging by the marking rubric i would put my project in this section. We can add private and public POIs, we can add rating, and we can</i>				

	<i>add to favourites which satisfies all levels of social 1</i>				
--	---	--	--	--	--

Additional notes: I think the over all project has come through a great transformation since the last project 1 in full stack. ITs not perfect its not polished but I am happy with the progress and believe reach over 50% on this one.

Placemark V2

	Social 1	Social 2	TDD	Authentication	Devops
Level 1	Private POIs	Reviews	Unit Tests	Sanitisation of input & output	Tagged Releases
Level 2	Public POIs	Share	Unit tests + coverage reports	Hashing & salting passwords	Git Flow
Level 3	Rating	Noticeboard	e2e Cypress - Basic	OAuth (login via Github, Google etc)	Render, AWS
Level 4	Favourites	Discussions	e2e Cypress - Enhanced	3rd Party Auth Service (Auth0, Firebase or equivalent)	Typescript

PlacemarkApp

	Analytics	Maps	Images	Authentication	Architecture
Level 1	Single Chart	Show POI on Map	Single Images per POI	Sanitisation of input & output	Svelte
Level 2	Multiple Chart Types	Map Layers based on Categories	Support Delete Image	Hashing & salting passwords	SvelteKit
Level 3	Apache ECharts (or equivalent)	Multiple Maps on single page	Multiple Images per POI	OAuth (login via Github, Google etc)	SSR
Level 4	Trends and Projections	Weather Conditions at POI / Weather Maps	Image Gallery Feature	3rd Party Auth Service (Auth0, Firebase or equivalent)	Full Stack
